

ABSTRACT OF THE DISCLOSURE

5

A deflection gauge dislodging system for performing
deflection tests of pipes while permitting the deflection gauge to be
readily dislodged from the interior of the pipe should it become
stuck in the pipe. The deflection gauge dislodging system includes
10 an elongate deflection gauge for measuring a minimum diameter of
a lumen of a pipe. A dislodging apparatus is provided for
dislodging the deflection gauge from a lodged condition in the
lumen of a pipe. The dislodging apparatus is adapted to impact
against the deflection gauge while the deflection gauge is
15 positioned in the lumen of the pipe.
